DETAILED ACTION

Allowable Subject Matter

1. Claims 1-19,22 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

As per the independent claims, the claim recitations pertaining to....

Burrows discloses a method of parsing and indexing a web page. The subject matter of Burrows has no relation to the present invention. In particular, there are fundamental differences between a speech lexicon and other structures that have some surface similarities to a lexicon. For example, a speech lexicon in the present context contains information related to the pronunciation and/or recognition of a spoken word. This word-dependent information is clearly lacking from the Burrows reference. Further, the Burrows reference makes no mention of word-dependent data for use in speech recognition. Burrows treats items that are not words, but information, such as metawords, as separate words that are indexed along with words parsed from a web page. Thus, the Burrows reference does not disclose anything related to a speech lexicon, nor does it disclose word-dependent data as provided in the claims.

While the Sarukkai et al. reference is directed to a computer system for user-provided speech actuation and access to stored information, it simply fails to teach or suggest, or remedy in any way, the deficiencies of the Burrows reference. Sarukkai et al. describe the basics of speech recognition and a method for dealing with out-of-context words. However, while the Sarukkai et al. reference may relate to speech recognition and web, the reference has nothing

Art Unit: 2626

whatsoever to do with generating a compressed speech lexicon for use in a speech application.

Further, the cited section of Sarukkai et al. (col. 3, lines 39-45) does not teach how to modify the web page indexing method of Burrows to one tailored to speech related applications or provides any motivation for such a modification; therefore the Sarukkai reference is also inapplicable to the present set of claims, and in any case, does not teach or suggest the limitations set out in the present claims, including the claimed word-dependent data. Nothing in the cited section teaches how to modify the web page indexing method of Burrows to one tailored to speech related applications or provides any motivation for such a modification, and the Sarukkai reference does not teach or suggest the limitations set out in the present claims, including the claimed word-dependent data. Also, there is no teaching in the cited section as to how one would modify the web page word indexing method of Burrows as modified by Sarukkai et al. such that the indexed words are used to build a compressed speech lexicon. The mere mention of "lexicon" in Poirer et al. is clearly insufficient to support a *prima facie* case of obviousness against the claims.

Burrows (i.e., word indexed web pages) does not include "associated word-dependent data selected from the group consisting of a pronunciation and a part-of-speech" for each word in the word list. Rather, the word list of Burrows merely contains a list of the words found in pages 200 that are returned to the browser 20 in response to the request 21. The cited word list of Burrows does not contain a pronunciation or a part of speech for each of the words because the cited word list is unrelated to a word list that is configured for use in a speech application. Additionally, there is no disclosure in Sarukkai et al. or Poirer et al. of the claimed word list and word-dependent data. Further, neither Sarukkai et al. nor Poirer et al. suggest or teach how one would modify the cited word list of Burrows to be configured for use in the speech application or how

Art Unit: 2626

one would modify the word list of Burrows to include the claimed word-dependent data.

Moreover, none of the cited references discloses "accessing an index to obtain a word location in the compressed speech lexicon that contains information associated with the received word including word-dependent data selected from the group consisting of a pronunciation and a part-of-speech". As mentioned above, Burrows, being unrelated to speech recognition applications, fails to include any word-dependent data used by speech recognition applications including either a pronunciation or a part-of-speech. Further, neither Pringle et al. nor Poirer et al. disclose the claimed speech lexicon or a method step of accessing an index to obtain a word location in the speech lexicon, as provided in the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Opsasnick, telephone number (571)272-7623, who is available Tuesday-Thursday, 9am-4pm.
